Sustainable Values

Verstegen are on the way to achieve fully CO2-neutral production. We have adopted our own wind turbine that supplies green energy. This guarantees that CO2 emissions are 50 times lower than emissions from "gray" electricity.

To compensate for other emissions, we focus on planting extra trees through food forests and the use of 876 solar panels. These solar panels will generate approximately 200,000 kWh per year. Further energy reduction is achieved by making office buildings more sustainable through insulation, the use of heat exchanger systems and no more gas consumption. We collect rainwater to reduce water consumption. This saves 500,000 litres of water annually. Before the waste water is returned to nature, it is purified.
